

Database Administrator III

What You'll Do:

The Database Administrator III designs, configures, and manages database system software and implements database security. You will manage and analyze database performance to ensure effective and efficient utilization of database systems/processes and maintain database dictionaries and support tools and develop and maintain accurate system documentation.

You will also develop and implement strategic, architectural, and tactical plans for the database and data warehouse environments; be conversant with, and cognizant of, the future direction of systems, how that direction impacts the company and how future and current database systems can be exploited for the company's benefit. The DBA will also provide technical leadership on database systems and solutions and individual mentoring and training on databases and tools. The DBA will recommend, test, and evaluate new technologies, software tools, and required skill sets, and recommend and implement improvements.

Qualifications:

- BS degree in Information Technology/Computer Science or equivalent combination of education and experience.
- Seven or more years of SQL server database experience as Database Administrator (DBA), including experience installing, configuring, designing, patching, archiving, and monitoring to include performance tuning databases with indexing.
- Experience utilizing various high availability (HA) and disaster recovery (DR) options for MS SQL Server.
- Experience with backup/recovery best practices.
- Advanced/specialized knowledge with query tuning and troubleshooting.
- Working knowledge of data encryption techniques and database querying and management tools.
- Microsoft certifications (preferred).
- Experience running and creating SQL Server health assessments reports/SQL Server Reporting Services (SSRS) report development/experience writing complex SQL Queries.
- Data warehouse design using star-schema and/or snowflake methodologies.
- PowerShell and Power BI development. (preferred)
