## EXCLUDED BRAND-NAME MEDICATIONS WITH GENERIC EQUIVALENTS\*

The brand-name medications below are excluded on the formulary. These brand-name medications have been identified as having available generic equivalents covered at Tier 1 on the formulary. Speak with your pharmacist to have your excluded brand-name medication substituted with its generic equivalent or another preferred alternative.

A generic medication contains the same active ingredient(s) as a brand-name medication. An active ingredient is what makes the medication work. Brand-name medications are often protected by a patent. When the patent ends, drug companies can apply to the U.S. Food and Drug Administration (FDA) to begin making generic versions of the medication.

\* Excluded brand-name medications without generic equivalents are included in the other medication tables.

<sup>1</sup> Grandfathering allowed, no duration limit. All other therapeutic classes do not allow grandfathering, no exceptions.

<sup>2</sup> Grandfathering allowed for diagnosis of HIV only, no duration limit. All other therapeutic classes do not allow grandfathering, no exceptions.

<sup>3</sup> All medications, preferred and non-preferred, require Prior Authorization. For new starts of non-preferred products, trial and failure of preferred brand(s) is required as part of the Prior Authorization process. Existing users of non-preferred medications may be eligible for continued coverage if documentation is provided demonstrating compliance and efficacy. Exceptions will be allowed for certain diagnoses if the preferred alternative(s) is not FDA-approved for that indication.
